

PENDULUM VIBRATOR VPA

The VPA series offered by Enar are perfect machines for Jobs that require a pendulum poker as they provide the necessary performance needed for intensive work. The machine comes with differing couplings that can be applied to the needs of the job.

QUALITY & EFFICIENCY

Oversized motors provide the capacity to work at a high level on intensive jobs. The housing is robust due to its resistance to falling from heights and things falling on it, plus it's IP44 standard meaning it will survive dust particles and water from splashes entering into the motor. It comes with a variety of plugs and motor drives adapting to each country (single-phase, 3-phase and 50/60Hz).

TECHNICAL DATA

MODEL	POWER (CV)	VOLTAGE (V)	FREQUENCY (Hz)	DIMENSIONS (LxWxH mm)
VPA D	1.5	400 3~	50	440x190x340
VPAM D	1.5	230 1~	50	440x190x340
VPAM H	1.5	230 1~	50	440x190x340
VPAME D	1.5	115 1~	50	440x190x340

- › 3-phase motor available at 400v 3-phase 50Hz, alternatively available upon request as 230v 3-phase 50Hz.
- › Motor speed: 3,000RPM.
- › Weight: 12.1Kg.
- › 60hz connection available upon request.
- › 3-phase motor provided with a clutch to prevent it from turning in the opposite direction.
- › Different plugs available upon request.

+ Secure Isolated Motor.

The range of motors provided for the VPA come with a housing with a resistant plastic/glass fiber mix to provide maximum strength while avoiding added weight to the product.

+ Versatile Thanks to its range.

The VPA range is available with several sizes of poker head from 25mm to 70mm meaning the user has a wide range of choices to complete their job to the best standard.

+ Robust! Designed to withstand the work site.

Robust housing designed to withstand small falls and items falling on top of the motor as well as dust and water splashes entering into the motor.
